Summary

Computer Engineering student at Pontificia Universidad Católica de Chile (Software Engineering major, Data Science & Analytics minor), with an academic exchange at KTH Royal Institute of Technology. Experience building scalable web/mobile applications, automated data pipelines, and AI-driven solutions.

Education

Pontificia Universidad Católica de Chile **Santiago, Chile**
B.Sc. in Computer Engineering *2022–2027*

Major: Software Engineering. Minor: Data Science & Analytics.

Relevant coursework: Artificial Intelligence, Data Mining, High-Performance Computing, Algorithms and Complexity, Software Architecture, Databases, Information Visualization.

KTH Royal Institute of Technology **Stockholm, Sweden**
Academic Exchange in Computer Science *2025*

Focus: algorithm design & analysis, computational complexity, high-performance programming.

Santiago College **Santiago, Chile**
Bilingual IB Diploma (International Baccalaureate), GPA: 6.9/7.0 *2013–2021*

Experience

Pullpo **Santiago, Chile**
Software Engineer / DevOps & Data Intern *Aug. 2025 – Present*

- Authored a shared Python library and established CI/CD pipelines via Artifact Registry, reducing new-integration deployment time by ~50% and codebase duplication by ~60%.
- Designed scalable ELT data pipelines (Python, SQL, dbt) embedding 60–100 automated data-quality tests per model.
- Developed an AI-powered Data Analyst agent (Anthropic SDK / Claude, Model Context Protocol) translating natural language into isolated BigQuery queries.
- Engineered a multi-tenant SaaS analytics platform (Next.js 14, React) with custom dashboards over isolated BigQuery datasets per client.
- Led a zero-downtime migration of client infrastructure to GCP, centralizing config with Secret Manager and least-privilege IAM.

Pontificia Universidad Católica de Chile **Santiago, Chile**
Teaching Assistant *2022–2026*

Introduction to Programming (Python), Linear Algebra, Dynamics, Physics, and Artificial Intelligence (prepared materials, taught classes, graded evaluations). Supported 100+ students; reviewed/debugged code for correctness and best practices.

Projects

GeriaPOP — Offline-First Healthcare Mobile App

React Native, TypeScript, WatermelonDB, AWS. Built in collaboration with a real hospital network (Red de Salud UC CHRISTUS) to digitize geriatric clinical tests; offline-first sync for zero-connectivity hospital environments.

Tic-Tac-Goal — Real-Time Multiplayer Game

React, Koa.js, PostgreSQL, WebSockets. Sub-50ms latency real-time multiplayer with a custom player-data scraping pipeline.

Properties Market Async — Microservices Auction Platform

Koa/Sequelize API, independent JWT auth service, MQTT real-time layer, WebPay payments, serverless (AWS Lambda) PDF generation, CI/CD, New Relic monitoring.

Planificador Académico UC — PMBOK-Managed AI Planner

Risk Analyst on a 7-person PMBOK-run project; authored the risk register; project closed at CPI 1.02 / SPI 1.11, on budget, ahead of schedule.

Technical Skills

Languages: Python, JavaScript, TypeScript, SQL, Ruby, C#, C++, R, HTML, CSS

Frameworks: React, React Native, Node.js, Express.js, Koa.js, Next.js, Ruby on Rails, FastAPI

Databases: PostgreSQL, MySQL

Cloud & DevOps: GCP, AWS (S3, RDS, Lambda), Docker, GitHub Actions, CI/CD, Secret Manager, IAM

AI/LLM: Anthropic SDK (Claude), Model Context Protocol (MCP), LLM integration, Claude Code

Practices: Full-stack & mobile development, API integration, automated testing, Agile/Scrum, code review

Languages

Spanish: Native

English: Advanced (C1) — IB bilingual diploma
